### THE KENYA NATIONAL EXAMINATIONS COUNCIL

# DIPLOMA IN BUILDING TECHNOLOGY DIPLOMA IN CIVIL ENGINEERING DIPLOMA IN ARCHITECTURE

### MODULE II

STRUCTURES'II, GEOTECHNOLOGY II AND CONCRETE TECHNOLOGY II

3 hours

#### INSTRUCTIONS TO CANDIDATES

You should have the following for this examination:

Answer booklet:

Drawing instruments:

Scientific calculator.

This paper consists of EIGHT questions in THREE sections: A, B and C.

Answer FIVE questions choosing TWO questions from section A, TWO questions from section B and ONE question from section C.

All questions carry equal marks.

Maximum marks for each part of a question are indicated.

Candidates should answer the questions in English.

This paper consists of 6 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

## SECTION A: STRUCTURES II

Answer TWO questions in this section.

Figure 1 is a simply supported beam carrying a point load as shown: 1. (a)

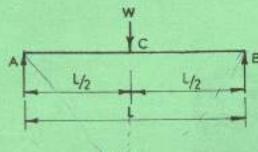

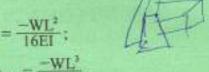

Figure 1

From Mohr's principles, prove that:

- maximum slope of the beam =  $\theta_{max} = \frac{-WL^2}{16EL}$ (i)
- maximum deflection of the beam,  $y_{max} = \frac{-WL^3}{48EI}$ . (ii)

Where E = modulus of elasticity; I = moment of inertia.

(16 marks)

- A simply supported beam of span 3 m is subjected to a central point load of 10 kN. (b) By using Q 1 (a) above, determine:
  - the maximum slope of the beam; (i)
  - the maximum deflection of the beam. (ii)

Take I = 12 x 106 mm4  $E = 200 \times 10^3 \text{ N/mm}^2$ .

(4 marks)

Differentiate between active earth pressure and passive earth pressure. 2. (a)

(b) Figure 2 shows a masonry retaining wall supporting two layers of soils.

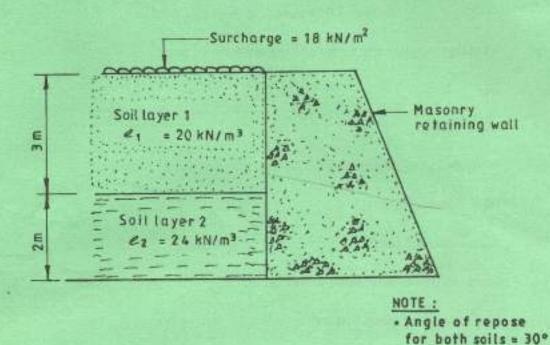

Figure 2

Determine:

(i) the resultant lateral force on the wall;

(ii) the distance of the point of application from the bottom of the wall.

(16 marks)

A 150 mm thick reinforced concrete slab simply supported on 200 mm thick walls has
effective spans of 6.6 m x 3.0 m. Use the data provided below to design for bending only
and hence sketch the slab showing reinforcement details.

Data			Looping -dead wood = 1 XI	24= 3.6
Finis Conc Take:	rete density	2.6 kN/m²; - 0.4 kN/m²; - 24 kN/m³;	efficience Sport = 6.6mx3.0m	5600=2.2
Conc		15	1.4×3.6 + 1.6× 2.6 = 3.04 7 415,277 = 912 manufer cylix = 6.63.0 = 6	(20 marks)

## SECTION B: GEOTECHNOLOGY II

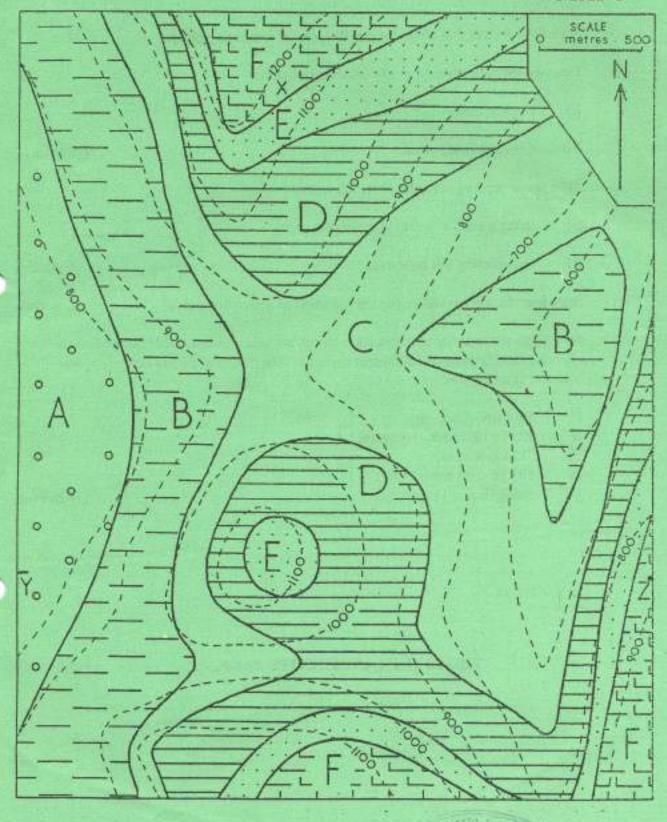

Answer TWO questions from this section.

4.	(a)	Explain the following terms of the elements of faults:				
		(i) fault;				
		(ii) dip.	(5 marks)			
	(b)	With the aid of sketches, describe the following types of faults:				
		(i) normal faults;	1			
		(ii) reverse faults.	(12 marks)			
	(c)	State the three recognition of faults.	(3 marks)			
5.	(a)	Explain three factors that influence the method of breaking a hard rock.	(6 marks)			
	(b)	Describe the drilling and blasting method of breaking a hard rock.	(8 marks)			
	(c)	Explain:				
		(i) handling misfire of explosives;				
		(ii) storing explosives.	(6 marks)			
6.	(a)	Distinguish between inlier and outlier.	(4 marks)			
	(b)	Discuss the term time-scale as used in geology.	(4 marks)			
	(c)	Map 3 shows the plan of a geological map.				
		(i) determine the gradient of the beds;				
		(ii) draw a geological section along Y-Z to show the layers A, B, C, D and E;				
		(iii) on the geological section, indicate an inlier and outlier.	(12 marks)

#### SECTION C: CONCRETE TECHNOLOGY II

Answer ONE question from this section.

- 7. (a) State four factors that affect the productivity of concreting plants. (4 marks)
  - (b) Describe the following types of concreting plants:
    - (i) trucker mixer;
    - (ii) central mixing plant.

(10 marks)

- (c) State three precautions to be observed when:
  - (i) using a hoist as a lifting appliance;
  - (ii) transporting wet concrete.

(6 marks)

8. (a) State four factors that influence the selection of concreting plant.

(4 marks)

- (b) Determine the quantity of materials required per batch and probable output from a concrete mixing plant of 1200 litres capacity. The design per 1000 litres of mixed concrete is as follows:
  - I 5.6 bags of cement;
  - II 923 kg of coarse aggregates;
  - III 715 kg of sand;
  - IV 195 litres of water;
  - V fixing time = 115 seconds.

(16 marks)
